MILNGAVIE PRIMARY SCHOOL AND ELCC

Explicit learning intentions and quality criteria

 $\cdot\,$ All students understand what they are trying to learn and confidently discuss this using subject terminology.

All students routinely determine and use their own success criteria to improve

Collaborative Learning

· Tasks and activities regularly require students to work in groups.

- · Students participate in, and have ownership of, classroom routines and expectations.
- · Groups engage in goal setting relative to their interactions with one another in the group.
- · Students are regularly engaged in tasks that require dialogue.

Motivation

 This will be evident through observation of what is happening in class, particularly during performance based tasks, lesson introductions and plenary sessions.

- Students are praised for effort and achievement rather than ability or personal attributes.
- · Students are helped to develop resilience and persevere in activities that they find challenging.

High Expectations

 Tasks demonstrate that high expectations are outlined for all students and that conceptual risk taking is encouraged and rewarded.

- All students are engaged in on-going dialogue,
- discussions and activities that challenge and stretch them.

 This will be evident through observation of what is happening in the classroom particularly during performance based tasks.

Respect and support

 Routines and procedures are negotiated and applied consistently, contributing to the development of a quality learning environment, e.g. rules for brainstorming, sweep, check in, teachers' handling of responses to questions, debrief, class contracts, etc.

The school encourages learning to be valued in the home.

Student self-management

Students support each other with their learning.

 Students are confident and able to indicate whether or not they understand concepts well, need a little help or need a lot of help.

 Students feel confident to ask questions about anything they are unsure of, e.g. parking lot, exit passes and questions.

Personalisation and choice

Tasks are designed to offer choice.

- · Students are encouraged to demonstrate their learning in different ways.
- Tasks are re-worded to incorporate aspects of problem-solving, e.g. Critical Skills approach.
- Some tasks/activities offer choice directly related to student interest and or experience.

Inclusion

- Acknowledgement is given to the achievements of all students.
- · Tasks are appropriately differentiated.

Skills necessary for effective collaboration are practised regularly, e.g. Task roles Constructive disagreement

<u>Higher Order Thinking</u> Skills

 Tasks involve students in creative and critical thinking to process information to improve understanding.

- Tasks regularly involve students in giving reasons and asking questions to clarify their thinking.
- Pupils have opportunities to express their ideas through
- Students have opportunities to
- listen and compare their ideas to those of others.

Establishing the progressive

development of skills and

dispositions

Learners are engaged in well

designed experiences that

require them to practise and

develop the significant and

demonstrable characteristics

that are critically important to

be successful in life and

learning.

in g to rove students

> Developing classroom cultures which create a quality learning environment This refers to a classroom where learners and teachers work together productively and are focused on learning. In such classrooms, there are high, clear expectations and positive relationships. Learners can, and do, take the initiative, peer and self evaluate and take responsibility for their learning. There is clear evidence of community and collegiality.

> > CURRICULUM RATIONALE-

> > > Four Aspects

Pedagogy

Ensuring high levels of intellectual challenge

High quality outcomes for learners result from learning which is focused on intellectual work that is challenging, centred on significant

concepts and ideas and involves learners in higher order thinking. Learners communicate their understanding in an elaborate or

detailed manner be it in oral, written or artistic form. This should allow learners to demonstrate a deep and meaningful understanding of central ideas.

Key Skills

- Students should be made aware of the skills component of activities.
- · Students should be involved in decision-making.
- · Students should have opportunities for personal achievement.
- Collaborative learning activities should be designed to contribute to the development of personal skills.
- · Specific skills are generally covered in the Es and Os.
- · Specific skills are effectively promoted within the appropriate curriculum areas.
- Literacy and numeracy skills should be developed across the curriculum.

Demonstrable progress

• Students and teacher define the criteria for demonstrating particular skills and dispositions.

• Students discuss the criteria; identify where they are on the continuum and what their next steps and personal goals will be.

• Teacher observations of behaviours during activities can inform the focus for debrief.

• Tasks are carefully designed to ensure that teachers and students can identify steps and progression in learning.

Developing classroom cultures which create a quality learning environment This refers to a classroom where learners and teachers work together productively and are focused on learning. In such classrooms,

there are high, clear expectations and positive relationships. Learners can, and do, take the initiative, peer and self evaluate and take

responsibility for their learning. There is clear

evidence of community and collegiality.

Deep knowledge

 Students are engaged in activities which are ahead of their development and which stretch their thinking and academic understanding.

 Students are encouraged to view mistakes as a learning opportunity.

Tasks challenge academic achievement while continuing to assure individual student success.

 Tasks encourage learners to work in their "growth" zone for long enough to provoke thought but not long enough to reach a state of total frustration.

 Tasks challenge students' thinking and allow them to engage in activities of significant academic depth. Deep understanding

 Students are able to do a variety of tasks which demand a higher level of thinking, such as explaining, finding evidence and examples, generalising, applying, analogising and representing the topic in new ways.

Tasks require students to demonstrate deep rather than superficial understanding of what they are learning. **David**

Perkins 'Thinking with what you know'

Visible Thinking

Tasks are designed to include opportunities to reflect, discuss, explain and record thinking.

 $\cdot\,$ Lessons encourage students to develop and practise a range of thinking and problem-solving strategies which can be used in different areas of the curriculum and in real life

 The nature and range of teacher questioning helps to develop thinking skills and understanding

· Students are encouraged to ask themselves questions such

as: *What am I being asked to do? *Have I met this before? *How much do I understand? *Why can't I do this? *How did I learn what I learned? *How has my thinking changed? <u>Communication</u>

 Tasks are designed to elicit student responses which are extended, demonstrate high level thinking and justify their views. This may take oral, written or artistic form.

 Frequent opportunities are given for debriefing. This can take the form of group discussion, journal writing or other reflective techniques which also assist the transfer of learning to new experiences.

 Opportunities are provided for dialogue between teacher/student and student/student in order that

Prior knowledge

Students are encouraged to contribute at the planning stage to avoid repetition and ensure progression of skills and deepening of knowledge.

Knowledge integration

Tasks and activities frequently and explicitly encourage the transfer of learning in one subject area to another. Connectedness

Inecleuness

 Students are involved in demonstrating their understanding through activities that require them to apply their knowledge in a variety of situations.

 Activities require students to create something new, by reshaping, expanding, extrapolating from, applying and building on what they already know.

 Students are involved in real life problem solving within the classroom, school, community or society and that is in need of a viable solution.

Relevance

 $\cdot\,$ Tasks are designed creatively to take account of the changing world.

· ICT is regularly used to support and be a vehicle for learning.

 Although it is still useful to 'know a lot well' and although facts are still important, students need to learn how to learn and this should be made explicit.
